

Dear Addap's community,

I have the pleasure to announce that Addap's have recently partnered up with PlayChip, a universal gaming and entertainment token.

The goal of PlayChip is to establish a new level of trust, transparency and security in the world of commerce while increasing customer loyalty in the gaming and entertainment industry.

The PlayChip team has been in stealth mode for the past 10 months as they have been developing their technology and ecosystem. PlayChip is set to be the biggest utility token to date with access to millions of users prior to the official launch through our network of partners known as the PlayChip Alliance.

The Addap's Browser is one of the primary technology partners in the PlayChip Alliance that will accept the PlayChip token. In turn, our global distribution channel through the PlayChip Alliance will accelerate the growth and speed of adoption of the the Addap's browser.

The PlayChip team is currently conducting a private pre-sale round and has limited information viable to the public. As we get closer to completing fundraising efforts, we will be releasing more information to the public as well as through our new telegram channels.

Based on these valuable strategic developments, Addap's has decided to put its ICO on hold to allow incorporating the developments with the new partnership. In the meantime, PlayChip has agreed to provide credits to the bounty program offered by Addap's prior to February of 2018 to Addap's bounty participants. We will shortly inform you the new terms.

We are excited to be part of the PlayChip Alliance and accelerated adoption of the Addap's browser. The future looks bright between Addap's and PlayChip.

Regards,

Adi Sossover  
Co-founder & CEO, Addap's
